Safety

This transducer must be used in electric/electronic equipment with respect to applicable standards and safety requirements in accordance with the manufacturer's operating instructions.

Caution, risk of electrical shock

When operating the transducer, certain parts of the module can carry hazardous voltage (eg. primary busbar, power supply).

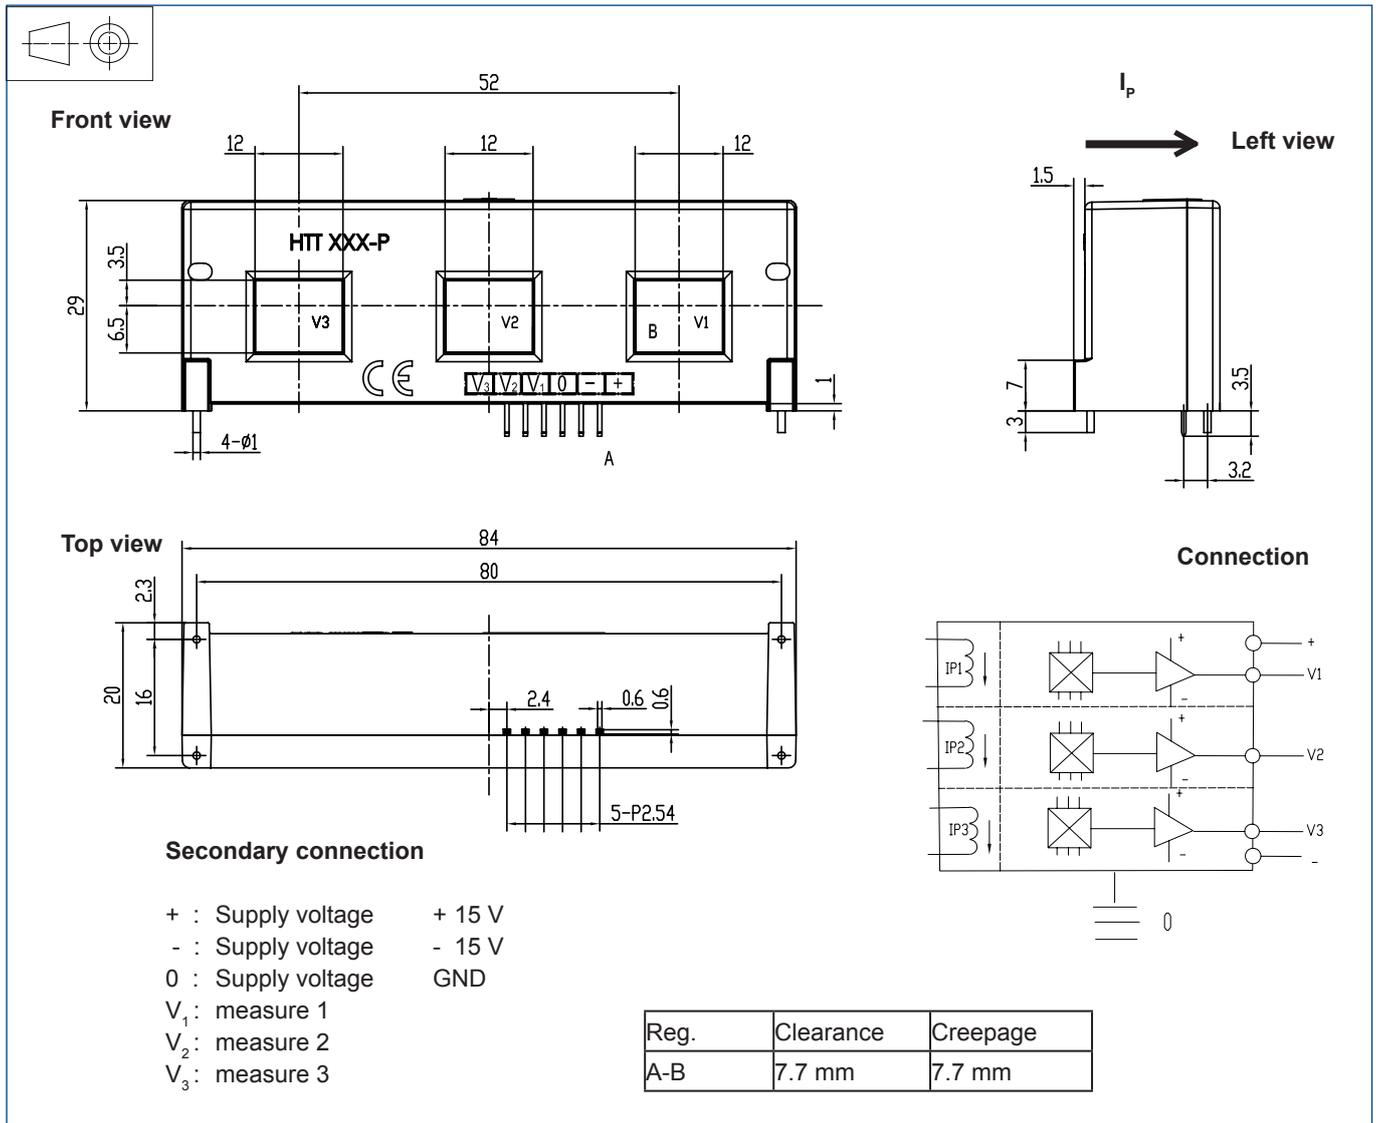

Ignoring this warning can lead to injury and/or cause serious damage.

This transducer is a build-in device, whose conducting parts must be inaccessible after installation.

A protective housing or additional shield could be used.

Main supply must be able to be disconnected.

Dimensions HTT 25 ... 75-P (in mm. 1 mm = 0.0394 inch)

Mechanical characteristics

- General tolerance ± 0.2 mm
- Primary through-hole 12 x 10 mm
- Connection of secondary L-PIN 0.6 X 0.6 mm
- Recommended PCB holes for
 - Secondary connections 1.0 mm
 - Fixing pins 4 x 1.2 mm

Remarks

- Terminals V₁, V₂, V₃ obtain the same voltage, when the primary current flows in the direction of arrow.
- The temperature of the primary busbar should not exceed 90°C.
- V_{OUT} is positive when I_p flows in the direction of the arrow.
- Dynamic performances (di/dt and response time) are best with a single bar completely filling the primary hole.
